

For the Asian market, Highcon launched the Highcon Euclid II series of digital cutting and creasing machines. This second generation of machines incorporates several new features, the result of valuable production input garnered from Euclid customers around the world.

The Euclid II series of machines includes the following new optional add-ons, all of which are included in the top of the line machine, the Euclid II+: Highcon integrated digital stripping unit, optical, fine cutting accelerator and web-to-pack software. Other new features of the Euclid II series include a new substrate handling system, enhanced creasing quality, cutting and user-friendly Interface: The latest version of the Euclid software offers user-friendly make-ready, new cutting and registration algorithms, efficient use of consumables, all of which contribute to provide improved productivity as well as enabling remote service. Highcon machines are available in India through their distributors Monotech Systems.
